Important – Please Read First

From EFILive Tune v7.5.6 build 132 or higher the software will automatically restrict mismatched operating systems being full flashed in to the ECM's in this document.

This document should still be used as a reference if you are using TIS / SPS to reflash an ECM.

The purpose of this document is to highlight the problem that exists when doing full OS flashes between incompatible years using either EFILive or GM's SPS.

The structure in parts of the ECM's changed between year models making operating system swaps a little harder (if not impossible) to perform without corrupting the ECM.

If the ECM corruption occurs you might be left in a situation where the vehicle will not start and EFILive or GM's own SPS cannot recover the ECM with the stock factory files, in this situation a new ECM might be the only solution.

On the following pages is a list of ECM types and the Operating System part numbers that can be programmed between OS's without fear of corrupting the ECM. You might get lucky with the earlier ECM's, but never program in to a 2009 or 2010 anything earlier, this will result in a failure.

Any Operating System in the same column as another is compatible, any not in the same column, flash at your own peril !

The year listed in the column might not match the year model of the vehicle you are dealing with, the year in those columns lists the year of the OS, the vehicle year model is 'almost' irrelevant to this exercise.

The list is built up from all the currently supported Operating Systems in EFILive's tuning tool for each ECM type, there maybe be others out there we don't know about, if in doubt ask around, there is no second chances.

As always, please remember to keep your EFILive software up to date, if you don't have EFILive, you can of course download the fully functional tuning and scanning software for free from www.efilive.com. EFILive users, please ensure you are running v7.5.6 build 132 or higher to ensure you have automatic corruption protection.

You should also visit our website often to ensure you have the latest copy of this document as new ECM operating systems are released regularly.

Note: We have tried to make this list as accurate as possible, however EFILive will not be held responsible for any errors or corruption of ECM's as a result of following our part numbers reference.
